

# Delivering Data Interoperability to Your Hands

Purpose-built for the payer ecosystem, **HELIOShub** is the first FHIR® Integration Platform as a Service (FiPaaS) designed to break down the barriers to data interoperability and FHIR® adoption quickly and at scale. A simple user interface coupled with a no-code, drag-and-drop integration builder, and rapid FHIR® transformation capabilities all built into one solution, lets payers quickly and easily connect and transform all their critical data into formats that meet the HL7® FHIR® standard, without either specialization or heavy lifting by IT teams.

Spend more time focusing on improving care experiences and 65% less on integrations.

Reduce data integration times by **65% or more**

## Easier, Faster FHIR® Compatibility:

### No-Code Integration Builder

Importing and transforming data from common sources like EHRs, ADT feeds, and UM clinical guidelines is easy with our no-code, drag-and-drop integration builder.

### Simple, User-Friendly

Seamlessly convert data into FHIR®-compatible formats and share newly converted data to other enterprise platforms for seamless data uniformity, care continuity, and greater lifetime value.

### Quickly Convert Data to FHIR® Formats

Reduce IT staff workload, costs, and reliance on professional services. Flexible configurations and the use of existing and custom integrations can reduce integration timelines by 65% or more, and **HELIOShub** has been shown to compress delivery times for a complex bi-directional flow by 80%.

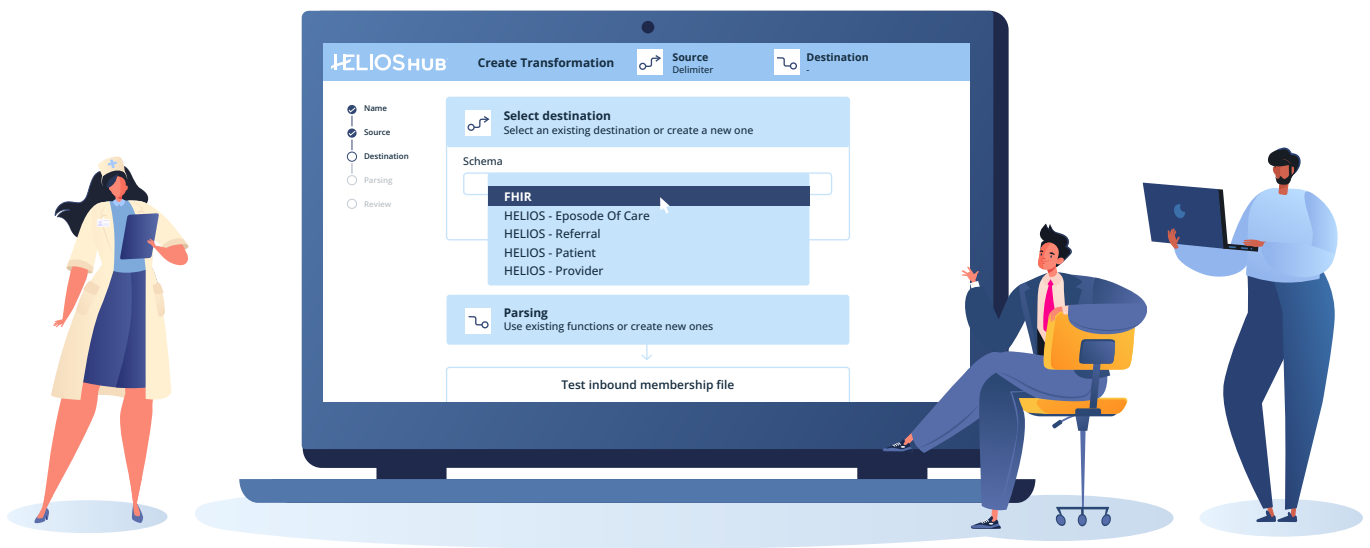

### Less Work for IT, No Specialization Needed

Includes a FHIR® store for leading implementation guides with a comprehensive library of APIs, real-time bi-directional integration flows, configurable data transformations to/from FHIR®, unlimited application connections, event-based automation, Pub/Sub Messaging, and S3/SFTP.

### Use with Existing & New Data Architectures:

Adopt FHIR® as part of your existing data architecture or build a front-end application with a fully functional backend FHIR® CDR; as well as push interfaces out of your existing CDR to quickly answer requests for FHIR® data.

## Self-Manageable with Configurable Controls, Settings & Features

**HELIOSHUB** simplifies data normalization between insurers, providers, and third-party applications, to give organizations endless flexibility and longevity with their data. You're in control of your data from day 1, enabling resource and cost-savings, and greater lifetime value.

**As a single solution for FHIR® data interoperability needs — transformation, storage, management — are in one place. No more expensive, multi-solution tech stack needed to get:**

- ✓ FHIR® store for leading implementation guides
- ✓ Real-time bi-directional integration flows
- ✓ Configurable data transformations to/from FHIR®
- ✓ Unlimited application connections
- ✓ Event-based automation
- ✓ A comprehensive API library that allows customers to self-manage import and export operations conforming to FHIR® formats
- ✓ Configurable admin settings and rules for complete self-management and control
